Aptitudes for.Telomeric DNA structures in a diversity of clinical human cells. The formation of telomeric DNA structures (T-DNA) is probably a widespread phenomenon in the cellular world. In many cells, in the presence of telomerase activity, T-DNAs are maintained throughout mitosis. The question of whether the same DNA structures are present in other cells where telomerase activity does not occur but instead telomeres are maintained by the alternative mechanism, referred to as alternative lengthening of telomeres (ALT), has not yet been fully addressed. Here we report the detection of T-DNA in a diversity of clinical cells where telomerase activity is not detectable. Nine human cell lines that exhibit alternative lengthening of telomeres were tested for T-DNA. Eight of them showed the presence of these structures. In all cell lines, the size of the detected T-DNAs was very similar. The detection of T-DNA in T-cell lines exhibiting ALT suggests that there are common, as yet unknown factors that control telomere length maintenance in different cell types, irrespective of the particular telomere lengthening mechanism. The data imply that the capacity for telomere maintenance is widely available and is not dependent on a particular mechanism of telomere lengthening.A Song of Ice and Fire (TV series) A Song of Ice and Fire is a fantasy television series based on the A Song of Ice and Fire fantasy series by American author George R.
